Salt Lake City, Utah

Subject: Information for Five-Year Review of Reclamation Surety Estimate for
Kennecott Utah Copper Corporation, Copperton Concentrator and 4th Line
Expansion, M/035/011, Salt Lake County, Utah

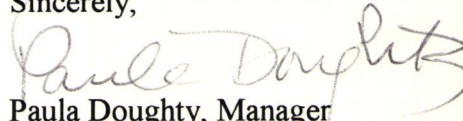

Dear Mr. Hedberg:

Enclosed please find two maps (Figure 1 and 2) to assist with the five-year review of the surety estimate for the Copperton Concentrator and 4th Line Expansion. Figure 1 shows current surface facilities, including roads, the process water reservoir, processing buildings, copper and copper/molybdenum thickeners, clarifier, copper thickener, ore stockpile (A-frame), tailings thickeners, retention ponds. Over the past five years there have been no new surface disturbances at the Copperton Concentrator apart for the construction of the temporary ore stockpile in 2002.

As stated in a letter sent to the Division of Oil, Gas and Mining on March 22, 2002, to ensure continuous operation of the Copperton Concentrator during the relocation of the primary crusher in the Bingham Canyon Open Pit, a temporary ore stockpile was constructed. The stockpile was located immediately west of the existing ore stockpile at the Copperton Concentrator during April through August 2002. The ore stockpile footprint was approximately 9 acres and was reclaimed in fall 2002 (Figure 2). Stockpiled topsoil was applied to the surface, which was subsequently ripped and hydro-seeded with a native seed mix (Table 1).

Please do not hesitate to contact me at 569-7120 if you have any questions or concerns.

Sincerely,

Paula Doughty, Manager
Environmental Affairs and
Strategic Resources
